~ Plant Fertility Categories Key

[S] Self: Will set fruit/seed as a single individual.

[S-I] Self-incompatible: Needs two genetically different parents to produce fruit/seed.

[Sp] Spores: A single individual will reproduce sexually from spores in a moist environment.

[M] Higher yield with multiple: Fruit/seed set vastly increases with two genetically different parents; especially important to berrying for wildlife or edible harvests.

[D] Dioecious: Both a male and female parent are required to produce fruit/seed. One male can pollinize ~4 females.

[D, S(F)] Dioecious/female self: Plants need a male and female parent to produce fruit/seed. A male plant will not have female flowers, but females can reproduce in a limited fashion either from male flowers on the same plant or self-pollinate without a male.

[L-S] Limited self: Plants have poor ability to set fruit/seed without a pollinizer.

[0] Sterile: Plants cannot reproduce sexually due to a flower mutation favoring showy, barren flowers over tiny, fertile ones.
